Predictive Services Discussion:

Dry and windy conditions will continue in portions of New England and the Great Lakes leading to elevated and locally critical conditions, with high-risk significant fire potential forecast across southern New England into New York and northern New Jersey. Dry and windy conditions will also continue in portions of the Deltana and Tanana Flats into the eastern Alaska Range. Isolated to scattered thunderstorms will develop across much of the Intermountain West and High Plains, with the greatest coverage in portions of the Southwest near the Mogollon Rim and from northeast Washington to northwest Montana. Scattered to widespread thunderstorms are expected across the Southeast through the southern half of Texas, including severe thunderstorms from the southern into central Appalachians and surrounding areas.
