National Fire Activity (October 27, 2023 - November 2, 2023):

Fire Activity and Teams Assigned
Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires: **
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:
Complex IMTs committed:

Totals
Light (621 fires)

Nationally, there is one fire being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.

## Geographic Area daily reports

## Understanding the IMSR

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

## Predictive Services Discussion:

Temperatures across the southern Plains into the Southeast will gradually warm into next week, with well above normal temperatures likely by mid-next week. Very dry conditions, with widespread relative humidity below $30 \%$ will continue into Saturday across much of the Southeast and southern Appalachians, before rising above $35 \%$ by early next week. Winds are forecast to be light overall as well, limited the potential for critical fire weather conditions. Several Pacific storms are forecast to move into the northwestern US this weekend into early next week, with heavy rain west of the Cascades, and moderate precipitation into northern California, the northern Great Basin, and northern Rockies. Snow levels will be high to start, above 8,000 feet, before falling to 4,000 to 6,000 feet by early next week. The southern half of the West will remain dry with above normal temperatures and low relative humidity. Breezy westerly winds are likely to develop Sunday into mid-next week and result in areas of elevated to critical conditions across the Southeast into the southern High Plains. Periodic cold fronts are forecast to move through the northern Plains into the Northeast with light to moderate rainfall.
