## Predictive Services Discussion:

Well above normal temperatures and low minimum relative humidity of $10-30 \%$ will continue across the Southwest into the southern Plains and Lower Mississippi Valley. Isolated dry thunderstorms will develop along the eastern Mogollon Rim into west-central New Mexico and west Texas. Scattered thunderstorms will develop across southern Oklahoma into east Texas and Louisiana as well, with some storms becoming severe. Above normal temperatures will spread across much of the West with light winds. Isolated to scattered mixed wet and dry thunderstorms will develop over central and southeast Idaho into Montana and northern Wyoming, with the thunderstorms becoming wetter as they move into the northern Plains in the evening and overnight. A cold front will stall along near the East Coast with scattered to widespread thunderstorms and showers, and severe thunderstorms in the Mid-Atlantic and Northeast. Below normal temperatures will continue over much of the Great Lakes into the Ohio Valley.
