## Predictive Services Discussion:

Hot temperatures will continue across southeast California and the Southwest, but relative humidity increase over yesterday with minimums above 15\%, while above normal temperatures continue across the rest of the West. Isolated to scattered mixed wet and dry thunderstorms will develop from the eastern Sierra and Peninsular Ranges into much of the Rockies. Gusty westerly Cascade Gap winds will develop in the afternoon and evening, creating locally elevated conditions, with light showers in western Washington overnight. Widespread thunderstorms and showers are forecast along the Front Range into the central Plains, with severe thunderstorms, heavy rain, and flash flooding possible. Scattered thunderstorms will also develop southward into Oklahoma and Texas. Above normal temperatures are expected across Texas and Oklahoma into the Lower Mississippi Valley and Southeast, where dry northerly flow will result in minimum relative humidity of 25-40\%. Scattered to widespread thunderstorms will develop from the Appalachians into the Northeast, and near normal temperatures will continue in much of the Midwest with a few thunderstorms in the western Great Lakes.
