## Predictive Services Discussion:

Isolated to scattered, mainly wet thunderstorms will develop across much of Nevada into the Four Corners states, with widespread thunderstorms from the Front Range into the southern Plains and central Texas. Near normal temperatures with higher daytime relative humidity is forecast across the southern half of the West into the central and southern Plains. However, above normal temperatures and dry conditions will continue across south Texas into the Lower Mississippi Valley and Southeast. Above normal temperatures are also forecast across the northern Intermountain West, with breezy west winds gusting to 30 mph in the Cascade Gaps and Columbia Basin. Widespread showers and scattered thunderstorms will occur along and behind a cold front from the MidMississippi Valley into the Great Lakes, while below normal temperatures and scattered thunderstorms develop behind the front from eastern North Dakota into northern Minnesota. Scattered thunderstorms will develop along the East Coast and across Florida.
