## Predictive Services Discussion:

Above normal temperatures and dry conditions are expected across the Intermountain West with near normal temperatures in much of California due to onshore flow. Breezy southwesterly sustained winds $15-30 \mathrm{mph}$ with gusts $30-45 \mathrm{mph}$ amid relative humidity of $5-20 \%$ will create critical conditions across northwest Nevada into southeast Oregon and southwest Idaho. Rain, with snow above 7,000 feet in the Cascades, will continue from northwest California into western Washington. Scattered light rain will begin to spill over the Cascade Crest overnight into eastern Oregon and Washington. Scattered showers and thunderstorms will develop near a slow-moving cold front from south and central Texas into the Lower Mississippi Valley and then along the Gulf Coast into Florida. Showers and thunderstorms will continue across the Upper Midwest, with scattered showers also spreading east into the Great Lakes, Mid-Atlantic, and southern New England.
