Predictive Services Discussion:

A Pacific cold front will slowly move inland as it weakens, with precipitation, including snow above 7,000 feet, continuing near and west of the Cascades from far northwest California into western Washington. Light showers will spread east of the Cascades into the Columbia Basin, Idaho Panhandle, and northwest Montana. Breezy west to southwesterly winds will continue across the northern Great Basin amid relative humidity of 10-25% creating locally elevated fire weather conditions. Above normal temperatures will continue across the Four Corners states, but with light winds. A brief push of subtropical moisture is likely to move into New Mexico, with isolated to scattered thunderstorms and showers. A decaying front will bring scattered to widespread thunderstorms and showers and isolated thunderstorms moving into the southern Great Lakes and Ohio Valley. Extensive cloud cover will continue over much of the Mid-Atlantic and New England, with areas of light rain and well below normal temperatures.
