## Predictive Services Discussion:

Another Pacific cold front will move through the Pacific Northwest into the northern Rockies and northern Great Basin. Rain will continue west of the Cascades, heaviest in western Washington, with snow above 7,000 feet. Rain will push east across the Columbia Basin into the Idaho Panhandle and northwest Montana as well. Breezy westerly winds gusting $25-35 \mathrm{mph}$ will continue across much of the northern Great Basin, but minimum relative humidity is forecast to be higher at $20-35 \%$ due to much cooler temperatures. Above normal temperatures will continue across the southern Great Basin, West Slope, and Southwest, with minimum relative humidity of $8-20 \%$ and sustained westerly winds of $10-18 \mathrm{mph}$. Showers and thunderstorms will continue across much of the Gulf Coast and Florida, spreading into portions of the Southeast Coast as well. Widespread showers with scattered thunderstorms will develop across the Ohio Valley and central Appalachians, with light rain into portions of the Mid-Atlantic.
