## Predictive Services Discussion:

West-southwest sustained winds of 10-20 mph gusting 20-35 mph amid minimum relative humidity of $8-20 \%$ will develop across southern and eastern portions of the Great Basin, western Colorado, southern Wyoming, and northern Arizona. Above normal temperatures and relative humidity below $15 \%$ will continue in the Desert Southwest as well. Southerly wind gusts of $20-35 \mathrm{mph}$, minimum relative humidity of $10-25 \%$, and temperatures in the 90s are expected across portions of the southern and central High Plains, but isolated thunderstorms are likely on portions of the southern High Plains into the Big Bend. Thunderstorms will develop across Florida and along the Gulf Coast, but hot and dry conditions are likely across portions of the Southeast through the Lower Mississippi Valley into much of Texas and Oklahoma. Showers and thunderstorms will continue in the Ohio and Tennessee Valleys into the central Appalachians and Mid-Atlantic, with showers and thunderstorms on portions of the northern Plains as well. Precipitation will continue along and west of the Cascades and from northeast Washington into northwest Montana, with some spillover rainfall on the Columbia Basin.
