Predictive Services Discussion:

Very low relative humidity of 5-20% will continue across much of the Inland Northwest, California, Great Basin, and southwest Wyoming, with poor overnight recovery of 20-40% for mid-slopes and ridges. Dry conditions, low relative humidity, and hot temperatures are likely across much of New Mexico into the southern Plains, as well. Winds will be lighter overall with westerly winds generally 10-15 mph across the West with southeasterly winds on the southern Plains. However, stronger westerly sustained winds of 15-25 mph with gusts 30-45 mph will develop in the Upper Snake River Plain into western Wyoming for elevated to locally critical conditions ahead of a cold front. Gusty northerly winds of 10-20 mph are also likely in the Okanogan Valley of Washington, spreading into portions of the Columbia Basin.

Scattered wet thunderstorms will develop near and east of the Divide in Montana into eastern Wyoming and the northern Plains. Isolated to scattered mainly wet thunderstorms will develop in much of Arizona, western New Mexico, and the Colorado Rockies, although drier storms are possible in eastern Utah. Heavy rain and extensive flooding will continue in the eastern Carolinas due to Tropical Storm Debby, with showers and thunderstorms spreading north into the Mid-Atlantic and southern New England. Strong southerly Chinook winds gusting to 50 mph will continue north of the Alaska Range for the eastern Interior, with well above normal temperatures.
