Predictive Services Discussion:

Low pressure will strengthen off the Northwest coast, with southwesterly flow increasing across southeast California, central/southern Nevada, and western Utah. Southwesterly winds of 12-25 mph with gusts 25-40 mph amid relative humidity of 5-20% are likely across the northern Mojave Desert into southern Nevada and bringing elevated conditions. Breezy and dry westerly winds are likely across northeast California into western Nevada, then across southeast Wyoming as well. Isolated to scattered showers and thunderstorms are likely far northeast Washington into north-central Montana, and in Arizona south of the Mogollon Rim. The Northwest will remain seasonably mild and dry with relative humidity remaining above 15% east of the Cascade Crest and 30% west of the crest.

Maximum temperatures 95-108°F are likely for much of New Mexico into the southern Plains and Gulf Coast. Very dry conditions are also expected, especially for portions of North Texas and southeast New Mexico as RH falls to 15-25%. A frontal system will bring showers and thunderstorms to the Tennessee and Ohio Valleys into the Great Lakes, while isolated thunderstorms will continue for the Lower Mississippi Valley with small rainfall footprints, where new ignitions are possible.
