

**Incident Management Situation Report  
Friday, December 6, 2024 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (November 29, 2024 – December 5, 2024):**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (287 fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:	0
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

## **Predictive Services Discussion:**

A weak Santa Ana wind event will continue across southern California into Saturday, with light offshore flow continuing through the remainder of the weekend. Strong high pressure along the West Coast will briefly weaken as an upper-level trough moves from off the British Columbia coast to the southern Plains this weekend into early next week. While light to moderate precipitation is expected in the Northwest, northern Great Basin, and northern/central Rockies, a moderate Santa Ana event is expected early next week in southern California with northeasterly winds gusting up to 60 mph. For the eastern US, lake effect snow showers will continue today before ending this weekend. Warm and dry conditions will continue in the Southeast, with the northwesterly, dry downslope winds on the east slopes of the Appalachians also abating. The storm in the southern Plains early next week is expected to progress north and east the remainder of the week. Widespread precipitation will fall from east Texas into much of the Southeast, Appalachians, Mid-Atlantic and Northeast. Warmer air with the system is likely to result in much of the precipitation falling as rain. However, much of the central and northern Plains will remain drier next week.
