Predictive Services Discussion:

Westerly winds gusting from 25 to 45 mph will redevelop in eastern Idaho, western Wyoming and parts of Montana Friday, with higher gusts possible near thunderstorms. Gusty southwesterly winds will impact Southern California into parts of the southern Great Basin. Minimum relative humidity across much of the Intermountain West, including inland California, is forecast to drop to between 5 and 20%, lowest from northern California into Nevada, southern Oregon and far southwest Idaho. Lighter winds and cooler temperatures are forecast across the Northwest behind the cold front, but this may result in increasing smoke and visibility issues near and downwind of ongoing wildfires during the morning and overnight hours. Isolated to scattered mixed wet and dry thunderstorms are expected across south-central Montana into Wyoming, eastern Utah and Idaho, the West Slope, and northern portions of the Southwest. Scattered mainly wet thunderstorms will develop farther south and east into southeast Arizona, New Mexico, and Colorado. Moderate to high-risk significant fire potential is forecast from northeastern California through portions of the Great Basin and northern Rockies Friday.

Rain will become more widespread across Alaska, though the eastern Interior will see one last warm day with isolated afternoon or evening thunderstorms. Another round of flooding rainfall is expected from eastern Texas to the coastal Carolinas. Enhanced trade winds will maintain dry and breezy conditions in the lee of Hawaii's higher terrain. The Great Lakes and Northeast will see dry and seasonable conditions.
