

**Incident Management Situation Report
Friday, November 29, 2024 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (November 22, 2024 – November 28, 2024):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (206 fires)
New large incidents:	2
Large fires contained:	5
Uncontained large fires:	2

Nationally, there are zero fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Predictive Services Discussion:

Strong high pressure will develop across the West this weekend through much of next week keeping the West dry, although a storm moving into British Columbia late next week may bring moderate to heavy precipitation to northwest Washington. Otherwise, strong valley inversions are expected with light winds and poor mixing. Lake effect snow showers will continue today through early next week with locally heavy accumulations, especially east of Lake Erie and Lake Ontario. The first Arctic airmass of the season will affect the northern Plains into the Upper Midwest this weekend before temperatures gradually warm next week. Much of the Southeast will remain dry the next week, with locally breezy northwesterly winds today through the weekend. Moisture will move north off the Gulf of Mexico into central and east Texas by mid-next week with widespread wetting rain forecast, possibly moving into portions of the Lower Mississippi Valley late next week. Very cold temperatures are expected across much of Alaska through the weekend while breezy and dry trade winds continue through the weekend across Hawai'i before weakening early next week.
