Predictive Services Discussion:

A strong cold front will move through the northern Plains and Great Lakes today and tonight. Little precipitation is expected with the front, except for scattered showers and isolated thunderstorms in the Great Lakes. Breezy and dry south to southwesterly winds will develop ahead of the front from central and west Texas into Oklahoma, the Mid-Mississippi Valley, and Ohio Valley. Breezy and dry northwesterly winds are also forecast behind the front across much of the northern Plains with the strongest winds on the northern and central High Plains. Elevated conditions are most likely in central Texas and Oklahoma into the central High Plains. Temperatures will remain above normal across the Intermountain West with minimum relative humidity of 8-20% and areas of poor overnight recovery for mid-slopes and ridges, especially in the greater Four Corners. A few light showers remain possible in northwest California, but breezy southwesterly winds will continue in the southern Great Basin into northwest Arizona.
