Predictive Services Discussion:

An upper-level low will move into Oregon, with isolated dry thunderstorms likely ongoing across eastern Oregon and moving into far west Idaho in the morning. Isolated to scattered mixed wet and dry thunderstorms will develop in the afternoon from the Oregon Cascades eastward into Idaho, with thunderstorms likely to continue overnight in northeast Oregon, central Idaho, and western Montana. Isolated mixed wet and dry thunderstorms will also develop in eastern Nevada into Utah and the West Slope. In addition, breezy and dry west to southwesterly winds of 15-30 mph with gusts 25-45 mph will develop in northeast California and much of Nevada as relative humidity falls as low as the single digits. The Southwest will turn drier today with any thunderstorms likely limited to southern New Mexico and far northern Arizona. Temperatures will also remain above normal in much of the West.

Breezy southerly sustained winds around 20 mph with gusts to 35 mph amid relative humidity of 7-15% will develop on the central High Plains, from northeast Colorado into western South Dakota creating elevated to critical conditions. Moisture is expected to increase across much of Texas with scattered to widespread showers and thunderstorms. A cold front will move into the Southeast with mainly isolated thunderstorms, but cooler temperatures. Cool, but much drier air is forecast to move through much of the Great Lakes, Ohio Valley, and Northeast behind the front.
