Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

## **Predictive Services Discussion:**

Dry and breezy southwesterly sustained winds of 12-20 mph with gusts to 35 mph amid relative humidity of 10-20% will create areas of elevated conditions across southern and eastern New Mexico into far West Texas. A cold front will stall from northeast Texas into the central Appalachians and Northwest, with widespread showers and thunderstorms, especially from northeast Texas into the Ohio Valley where heavy rain and areas of flooding are expected. A deep upper-level trough will remain over the Intermountain West, with scattered showers in the Rockies, mainly falling as snow. Some mixed precipitation will fall into the adjacent northern and central High Plains, as well. Drier conditions will continue across the Southeast with southern winds around 10 mph, but minimum relative humidity will remain above 40%. Light snow is expected to end across the Interior of Alaska, with scattered showers continuing in far western Alaska, while land and sea breezes are expected across Hawai'i with widespread showers across Kauai as a cold front approaches.
