

Incident Management Situation Report
Sunday, August 3, 2025 – 0730 MDT
National Preparedness Level 3

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (181 fires)
New large incidents:	5
Large fires contained:	1
Uncontained large fires:	38
CIMTs committed:	8
NIMOs committed:	0

Nationally, there are Three fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Three fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Predictive Services Discussion:

Breezy west to southwesterly sustained winds of 15-20 mph with gusts 25-35 mph will develop across much of Nevada amid relative humidity of 5-14% creating widespread elevated to locally critical conditions. Very dry air will also spread across much of the Mojave Desert, Utah, and Arizona, as well as Colorado and New Mexico west of the Continental Divide as minimum humidity falls to 4-12% with very poor overnight recovery of 10-30%. Locally elevated conditions due to westerly winds are possible, as well. Scattered mainly wet thunderstorms will develop across central and northeast Oregon into central Idaho, with isolated mixed wet and dry thunderstorms to the south from northeast California into southeast Oregon, southwest Idaho, and far northern Nevada.

With the very dry air across the monsoon will take a break, with scattered showers and thunderstorms farther east across much of the Plains. Scattered showers and thunderstorms will develop along the Gulf Coast into much of the Southeast, but much of the Northeast will remain dry with locally low relative humidity of 25-35%. Warm and dry weather will continue across Interior Alaska, while the strong trade winds in Hawai'i will ease slightly but locally critical conditions are possible as minimum humidity falls to 35-45%.
