Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Predictive Services Discussion:

Hot, dry, and unstable conditions are likely along much of the West Coast near and west of the Cascades and Sierra as near record-setting temperatures 10-25°F above normal are expected. Very low RH of 5-15% is expected in much of California, the Inland Northwest, and central/western Great Basin with poor overnight recovery. Minimum RH of 15-25% is expected in the Willamette Valley, as well, and isolated mixed wet/dry thunderstorms are likely in the Transverse/Peninsular Ranges of California and the southern Sierra providing a potential ignition source.

Monsoon moisture deepens over the Southwest with scattered showers and thunderstorms. Farther north, moisture will continue to move in for the central/southern Great Basin and West Slope. Isolated to scattered mixed wet/dry thunderstorms and potential new ignitions are expected, focused from central Nevada to the West Slope and Wyoming, with the wettest storms likely across far southern Nevada and Utah. Strong outflow winds near or exceeding 50 mph are possible with any thunderstorms. Across Montana, temperatures will be closer to normal with moderate RH near or above 20% and light northeast winds are likely.

Elsewhere, isolated showers and thunderstorms will develop along the Gulf Coast into Georgia and South Carolina, but storms will be more isolated in South Florida. Dry and breezy north to northeasterly winds of 10-20 mph amid RH of 20-35% are expected in eastern New England in the wake of Hurricane Erin. Scattered showers and thunderstorms will develop across the central Plains into the Upper Great Lakes.
