

**Incident Management Situation Report**  
**Sunday, August 24, 2025 – 0730 MDT**  
**National Preparedness Level 4**

**National Fire Activity:**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (112 fires)
New large incidents:	4
Large fires contained:	2
Uncontained large fires:	45
CIMTs committed:	20
NIMOs committed:	0

Nationally, there are five fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Five fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

**[Understanding the IMSR](#)**

**[IMSR Map](#)**

Two MAFFS C-130 airtankers and support personnel have been deployed to Colorado Springs, CO and two MAFFS C-130 airtankers and support personnel have been deployed to Mesa, AZ to support wildland fire operations nationally. Their respective units are as follows: 302nd (Peterson SFB, CO) and 152nd AW (Reno, NV) to Colorado Springs, CO and 146th AW (Channel Islands, CA) and 153rd AW (Cheyenne, WY) to Mesa, AZ.

## **Predictive Services Discussion:**

Hot, dry, and unstable conditions prevail along much of the West Coast near and west of the Cascades and Sierra, and across the Pacific Northwest and western Montana, with temperatures 10-20°F above normal. Monsoonal moisture moving over the area will start to increase RH a little, however low RH of 10-20% is expected over the area. Overnight recovery will also be broadly improving, however still poor in parts. The thunderstorm risk continues to increase across the West Coast as monsoonal moisture builds, with isolated mixed wet/dry thunderstorms likely around and near the Sierra as well as the Cascade ranges in Oregon and potentially Washington, providing a potential ignition source – gusty thunderstorm outflows are possible. High-risk significant fire potential is forecast for thunderstorms across northern California.

Higher monsoon moisture over the Southwest will bring scattered showers and thunderstorms to those parts, with moisture extending into the northern Great Basin and across the Central Rockies. Isolated to scattered mixed wet/dry thunderstorms expected across much of the central/southern Great Basin and across the Central Rockies - these thunderstorms will mostly bring wetting rain. However, dry and gusty thunderstorms remain a risk across the western and northern fringes of the moisture plume, with any lightning in these parts increase IA given how dry fuels are.

Elsewhere, isolated showers and thunderstorms will develop along the Gulf Coast and the east, extending to the Great Lakes area and into the central Great Plains. Across New England, RH increases to near 40% amid breezy south to southwest winds 15-20 mph and gusts to 35 mph elevated fire potential along the Maine coast.
