

**Incident Management Situation Report  
Wednesday, August 27, 2025 – 0730 MDT  
National Preparedness Level 4**

**National Fire Activity:**

| <b>Fire Activity and Teams Assigned</b> | <b>Totals</b>     |
|---|-------------------|
| Initial attack activity:                | Light (137 fires) |
| New large incidents:                    | 4                 |
| Large fires contained:                  | 3                 |
| Uncontained large fires:                | 45                |
| CIMTs committed:                        | 20                |
| NIMOs committed:                        | 0                 |

Nationally, there are six fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Six fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

## **Predictive Services Discussion:**

Widespread showers and scattered thunderstorms are expected across southern and central Idaho into western Wyoming into far southwest Montana with localized flash flooding possible, with debris flows possible on recent burn scars. However, to the north across much of Washington and northern Idaho, thunderstorms will be more isolated and drier with several new ignitions likely, especially from any ongoing thunderstorms in eastern Washington during the morning. Monsoon moisture will continue to slowly wane in southern California and the Southwest with the drying trend spreading into the rest of California, the central and southern Great Basin, and West Slope. Isolated to locally scattered wet thunderstorms will develop in these areas but be less numerous than the past few days. Relative humidity will remain elevated, however, with minima above 25%, except in California where humidity could drop as low as 10%.

In the eastern US, a cold front is likely to move into the Upper Midwest with scattered showers and isolated thunderstorms, while the Northeast is likely to remain dry but with light winds. Dry conditions are also likely to continue from the Ohio Valley into the Southeast, with thunderstorms in Florida becoming more isolated and confined to the southern half of the state. More widespread thunderstorms are likely in Kansas and Oklahoma and spread into southwest Missouri overnight but miss most of Texas where thunderstorms will be isolated.
