

**Incident Management Situation Report  
Friday, December 19, 2025 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (December 12, 2025 – December 18, 2025):**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (340 fires)
New large incidents:	4
Large fires contained:	3
Uncontained large fires:	1
CIMTs committed:	1
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

**[Understanding the IMSR](#)**

**[IMSR Map](#)**

CIMT (NW Team 10) has been mobilized to Mount Vernon, WA to provide widespread flood support.

**This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.**

**Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.**

## **Predictive Services Discussion:**

Strong downslope westerly winds will develop along the Front Range today, bringing critical conditions as relative humidity falls to 10-20%. Elevated conditions due to breezy southwest winds are expected across southern Plains today, as well. Stronger westerly winds are expected across the southern High Plains tomorrow for critical conditions. Overall, much of the Plains will remain dry with well above normal temperatures for the next week, with another period of strong winds bringing elevated to critical conditions mid-next week. Mixed precipitation will fall in the Northeast today as a cold front moves off the coast, with lake effect snow continuing in the Great Lakes through tomorrow. Much of the eastern US will then be drier except for a cold front bringing scattered light showers to the Great Lakes, Mid-Atlantic, and Northeast.

A series of atmospheric rivers will move into California over the next week, with heavy rain, areas of flooding, and high elevation snow. Moderate precipitation will spread into much of the Great Basin, with snow levels averaging 6,000 to 7,000 feet. Periods of lighter precipitation will fall across the Northwest and northern Rockies, with cooler temperatures bringing average snow levels down to 3,000 to 5,000 feet. Much of the Southwest will remain dry until precipitation reaches Arizona late next week. Much of Alaska will remain very cold for the next week, with localized strong northerly winds continuing in south-central Alaska, especially this weekend. Heavier showers are expected over the western islands today, with trade winds and drier conditions expected to return this weekend.
