Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Northeasterly Santa Ana winds will weaken this morning with low relative humidity of 5-15%. Winds are likely to turn weakly onshore this afternoon with increasing humidity, especially closer to the coast. A cold front will move south through northern California, the Great Basin, and central Rockies, with light to moderate snow from the Sierra into the central Rockies. Colder air will move into the northern Intermountain West while very dry conditions continue in the Southwest. Breezy and dry westerly winds of 15-25 mph with gusts to 45 mph will develop across the southern High Plains this afternoon, as well, as the front moves through the central Plains. Dry weather will continue across much of the eastern US aside from scattered light snow in the Great Lakes, with well below normal temperatures persisting in the Southeast. A strong storm will continue to move through Alaska, with strong winds, rain, and snow. Breezy and dry trade winds will return to Hawai'i with a few windward showers.
