

**Incident Management Situation Report
Friday January 31, 2025 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (January 29, 2025 – January 30, 2025):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (200 fires)
New large incidents:	4
Large fires contained:	3
Uncontained large fires:	4
CIMTs committed:	0
Type 1 IMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	1,369
Acres (2015 – 2024 as of today)	21,869

Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

An active weather pattern is forecast across the northwestern US the next week, with a long-lived atmospheric river affecting Oregon through central California today through early next week. Heavy rain will fall in western Oregon to central California, with heavy snow in the mountains above 5,000 to 7,000 feet. Moderate to heavy precipitation will also spread across the northern half of the Intermountain West, with heavy snow in the mountains. The storm will shift south into southern California into the southern Great Basin with moderate precipitation late next week, while precipitation becomes scattered and lighter in the northern half of the West. A storm will move from the Appalachians today to off the East Coast tomorrow with widespread precipitation, heaviest in the Mid-Atlantic and Northeast, and falling as snow in northern New England. A drier pattern is forecast across the eastern US early next week, with another round of precipitation likely late next week from the Mississippi River to the East Coast, with snow likely to be limited to the Upper Great Lakes. Near to below normal temperatures are likely to continue for much of central and eastern Alaska into next week under an upper-level ridge, while periods of precipitation and near to above normal temperatures affect the western coast. A Kona low will push east of Hawai'i today with showers continuing for the Big Island, followed by dry conditions with breezy trade winds this weekend into early next week.
