## **Predictive Services Discussion:**

A cold front is forecast to become stationary from far northern California to the Dakotas today, separating unseasonably cool conditions in the greater Northwest from warmer and drier weather to its south. Monsoonal activity will be limited to portions of the Southwest and Continental Divide, while a few thunderstorms may form in the afternoon over the mountains of the northwestern U.S.

Elevated fire weather is expected across parts of Nevada, Utah and northwestern Arizona, where humidity will range from 10-15% and south-southwest wind gusts as high as 25-35 mph are expected. Mainly wet thunderstorms are forecast over southeastern Arizona into much of New Mexico and Colorado, but frequent lightning and erratic outflow winds will accompany this activity. Isolated thunderstorms are possible from the mountains of far northern California into the Northwest, northern Great Basin and northern Rockies, but temperatures will be as much as 10-20° below average. Some elevated fire weather may affect northwestern Texas into western Oklahoma as highs warm above 100° and south winds gust up to 35 mph, but fuels are less receptive there than in the West.

Low pressure developing along an old front in the coastal Southeast will result in locally heavy rain, while the Northeast will be dry and mild. Severe storms are expected in the Upper Midwest.
