

Incident Management Situation Report
Tuesday, July 29, 2025 – 0730 MDT
National Preparedness Level 3

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (168 fires)
New large incidents:	4
Large fires contained:	1
Uncontained large fires:	33
CIMTs committed:	9
NIMOs committed:	1

Nationally, there are eighteen fires being managed under a strategy other than full suppression. Fifteen fires are in Alaska. Three fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Predictive Services Discussion:

Very dry conditions with minimum relative humidity of 4-15% with poor overnight recovery will persist across much of central Nevada and southeast Idaho south and eastward through Utah into much of the central and southern Rockies west of the Divide. Locally elevated conditions will develop in east-central Nevada to western Utah due to southwesterly sustained winds of 12-20 mph and gusts to 30 mph. Monsoon moisture will continue to slowly work northwestward east of the Divide in Colorado and New Mexico and possibly into southeast Arizona. Isolated to scattered wet thunderstorms will develop in the monsoon moisture, but isolated dry thunderstorms are possible on the northwestern fringe of the moisture in east-central Arizona to northwest New Mexico and portions of the West Slope. Isolated to scattered mixed wet and dry thunderstorms will develop from northeast California into western Montana, with wetter storms east of the Divide in Montana. Temperatures will warm across much of the northwestern US today as relative humidity falls to 10-25%. Isolated, mainly dry, thunderstorms will develop from the northern Sierra into central Oregon overnight, with the storms in the northern Sierra most likely to produce wetting rain.

Temperatures will cool in the Southeast due to scattered showers and thunderstorms, but above normal temperatures will persist from the Mid-Mississippi Valley to the Northeast. Dry conditions will persist on the southern Plains, while scattered showers and thunderstorms are expected ahead of a cold front from the central Plains into the Great Lakes. Cool conditions are expected across most of Alaska with areas of wetting rain, although portions of the southeast Interior will remain dry.
