Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Temperatures 10-20°F are expected across much of the West today amid minimum relative humidity of 5-20%, with daily record high temperatures likely in the Southwest and southern Great Basin. Breezy southerly winds of 15-20 mph with gusts to 30 mph will develop across central and southern Nevada creating elevated conditions. Isolated to scattered mixed wet/dry thunderstorms will develop in northern California into southwest and south-central Oregon, with a few storms continuing overnight. Isolated dry thunderstorms will along the Oregon-Nevada border east into the Wasatch and Uinta Mountains, while isolated mixed wet and dry thunderstorms will develop in southeast Arizona into southwest Colorado. Isolated to scattered mixed and dry thunderstorms will develop in central and eastern New Mexico into West Texas, the Colorado Front Range, and southeast Wyoming.

A cold front extending from Oklahoma to the Great Lakes will bring scattered to widespread showers and thunderstorms from the Texas Panhandle northeast to the Great Lakes. Isolated to scattered showers and thunderstorms will continue to develop from the northern Gulf Coast and Florida into the Ohio Valley and Appalachians, but the Carolina Coast and central Texas will remain dry. The warming trend will continue across the Alaska Interior, but isolated showers and thunderstorms remain possible in the eastern Interior and eastern Brooks Range.
