## **Predictive Services Discussion:**

A strong storm will develop over the Plains with west to southwest sustained winds exceeding 20 mph will be common as minimum relative humidity falls to 5-25%. A corridor of extremely strong west to southwesterly winds of 30-50 mph with gusts of 60-85 mph are forecast from West Texas into central Oklahoma and southeast Kansas with minimum relative humidity in the single digits. Poor overnight humidity recovery of less than 30% is expected for much of central, South, and West Texas. Winds are likely to remain elevated at 15-25 mph in some areas before winds increase across central and South Texas tomorrow. Lighter winds are expected on the Plains Sunday.

Ahead of the dry line in the Lower/Mid-Mississippi Valley, strong to severe thunderstorms will develop, with tornadoes most likely in the Lower Mississippi Valley and widespread strong straight-line winds in the Mid-Mississippi Valley. Farther east in the Appalachians, southerly downslope winds of 15-25 mph with higher gusts amid RH of 15-30% are likely to develop from northern Alabama to eastern Kentucky and western Virginia, creating areas of elevated conditions into Saturday afternoon. Severe thunderstorms are likely in the Appalachians and Southeast this weekend, with wetting rainfall also likely from the Appalachians to the East Coast. In the West, another storm will move into the northern two-thirds of the West this weekend, with widespread rain and mountain snow.
