Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Breezy east winds of 15-30 mph with gusts to 40 mph will occur across northern Minnesota into Upper Michigan amid minimum relative humidity of 15-25% creating elevated conditions. Very dry conditions with minimum relative humidity of 3-12% will overspread the Mojave Desert into the southern Great Basin and Southwest, with poor overnight recovery of 15-30% for mid-slopes and ridges. Widespread wetting rain will fall from the eastern Dakotas into the Lower Great Lakes, with widespread showers and thunderstorms for the Ohio and Tennessee Valleys. Some of the thunderstorms will be severe, with heavy rain and flooding possible as well. Florida and South Texas will remain dry today, with continued above normal temperatures. A weak cold front will move through the northern half of the West with scattered showers and high elevation snow. In Alaska, scattered showers are expected over the eastern half of the state with near normal temperatures.
