

Incident Management Situation Report
Thursday, May 29, 2025 – 0730 MDT
National Preparedness Level 2

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (78 fires)
New large incidents:	3
Large fires contained:	2
Uncontained large fires:	11
CIMTs committed:	1
Type 1 IMTs committed:	0
NIMOs committed:	1

Nationally, there are zero fires being managed under a strategy other than full suppression.
Uncontained large fires include only fires being managed under a full suppression strategy.

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted Monday - Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

GACC	Incidents	Cumulative Acres	Crews	Engines	Helicopters	Total Personnel	Change in Personnel

TOTAL ACRES:		101,083	8,836	39,252	15,048	843,087	132,341	1,139,647

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	20,612
Acres (2015 – 2024 as of today)	1,146,365

Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Above normal temperatures are forecast throughout the West, with very dry conditions and low minimum relative humidity of 3-15% continuing for the Mojave Desert, southern Great Basin, and Southwest, west of the Divide. Low relative humidity below 20% is also forecast for central California into much of the northern Intermountain West. Breezy westerly Cascade Gap winds gusting to 40 mph will develop on the east slopes of the Cascades into the Columbia Basin creating areas of elevated conditions. Isolated mixed wet and dry thunderstorms will develop in the Rockies, with the greatest chance for new lightning ignitions remaining in central New Mexico. Scattered showers and thunderstorms will develop from the southern Plains into the Ohio Valley and Southwest. Light showers will gradually diminish in the Northeast, while dry conditions persist from northern Minnesota into Upper Michigan, with minimum relative humidity of 20-30% but light winds. In Alaska, isolated showers and thunderstorms will develop across south-central Alaska into the central eastern Interior, while drier conditions develop in the western third of the state.
