

**Incident Management Situation Report
Friday, November 28, 2025 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (November 21, 2025 – November 27, 2025):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (201 fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:	0
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

Southern Area	FIRES	669	0	86	132	24,319	759	25,965
Southern Area	ACRES	57,256	0	17,679	38,132	699,369	73,808	886,243
TOTAL FIRES:		3,244	2,211	229	462	48,806	6,575	61,527
TOTAL ACRES:		206,984	1,524,905	37,002	109,231	1,927,052	1,122,732	4,927,904

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	54,391
Acres (2015 – 2024 as of today)	7,138,094

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Breezy and dry north winds will bring elevated conditions today to the Florida panhandle and Florida Gulf Coast before winds weaken for the weekend. Surface low pressure will develop over the central Plains today and move into the Great Lakes this weekend bringing significant snowfall to portions of the Midwest, likely heaviest in the Great Lakes. The associated cold front will bring widespread wetting rain to the Lower/Mid-Mississippi Valley into the Ohio Valley through tomorrow, with light rain spreading into the Appalachians and East Coast Sunday into Monday morning. The front will bring little rain to the Southeast initially, but a wave will develop along the front mid-next week with wetting rain more likely. As the wave moves northeast off the coast, precipitation will spread into the Mid-Atlantic and Northeast, with mixed precipitation and snow for the Northeast. Mostly seasonable temperatures are expected in the West for the next week, with light snow ending in the northern and central Rockies tonight into tomorrow morning. Another weak storm will move into the Northwest and northern Rockies mid-next week with light valley rain and mountain snow. A stronger storm may move into the Northwest late next week, while much of California and the Southwest will remain dry the next seven days. A warmer and wetter period is expected in Alaska beginning this weekend and possibly continuing into mid-next week, with areas of heavy precipitation and strong winds, especially for the southern and western coasts. Light to moderate and dry trade winds are expected across Hawai'i, with mostly light windward showers.
