

**Incident Management Situation Report
Monday, October 6, 2025 – 0730 MDT
National Preparedness Level 2**

National Fire Activity (October 3, 2025 to October 5, 2025):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (199 fires)
New large incidents:	3
Large fires contained:	3
Uncontained large fires:	9
CIMTs committed:	3
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

This report will be posted Monday – Friday at 0730 Mountain Time unless significant activity occurs.

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Light easterly winds are expected across the Northwest into northern California today, with minimum relative humidity of 12-25%. Very dry conditions are expected from the Mojave Desert to the Southwest with minimum relative humidity of 7-15% but winds will be light. Isolated showers and thunderstorms are expected on the Front Range into the central and southern High Plains, with light snow likely above 8,000 feet. A cold front will slowly move into the southern Plains, Mid-Mississippi Valley, and Great Lakes with scattered to widespread showers and thunderstorms. Scattered showers and thunderstorms are also expected in the Lower Mississippi Valley with weak surface low pressure, with isolated thunderstorms in Florida. Breezy and dry southwesterly winds are expected ahead of the front in the Northeast with minimum humidity of 25-35% and gusts to 25 mph creating locally elevated conditions.
