

**Incident Management Situation Report
Monday, September 15, 2025 – 0730 MDT
National Preparedness Level 3**

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (41 fires)
New large incidents:	5
Large fires contained:	0
Uncontained large fires:	47
CIMTs committed:	17
NIMOs committed:	0

Nationally, there are four fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Four fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Six US Army HH-60 MEDEVAC Helicopters from the 1st Air Cavalry Brigade (Fort Hood, TX) have been deployed to California to support wildland fire operations nationally.

Predictive Services Discussion:

A high-pressure ridge quickly amplifies along the West Coast. Light to moderate northeast to east winds 10-15 mph developing from western Washington and Oregon to Northern California, increasing Monday night with 25-35 mph along the ridges. Temperatures will warm 5-10 degrees today across the Northwest and California, with RH dropping to 15-25%. Overnight recovery will be poor to moderate with RH 25-35% in the drier locations, especially along and west of the Cascades into California and the Great Basin. Fire behavior will pick up on existing fires with an increase in initial attack possible from recent lightning. Low pressure will weaken as it tracks east across the northern Great Basin and northern Rockies. Cooler temperatures, higher RH and scattered showers and thunderstorms will occur across the northern Rockies, northern Great Basin and northern Colorado into the Plains.

Strong high pressure from the Great Lakes to the lower Mississippi Valley with continued well above normal temperatures and RH of 25-35% across much of the East, except for isolated thunderstorms with small rainfall footprints from the southern Plains to the Tennessee Valley. Low pressure in the Coastal Mid-Atlantic will generate scattered showers and cooler temperatures. Isolated showers and thunderstorms continue in Florida.
