

**Incident Management Situation Report**  
**Wednesday, September 17, 2025 – 0730 MDT**  
**National Preparedness Level 3**

**National Fire Activity:**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (101 fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires:	38
CIMTs committed:	16
NIMOs committed:	0

Nationally, there are four fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Four fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

**[Understanding the IMSR](#)**

**[IMSR Map](#)**

Six US Army HH-60 MEDEVAC Helicopters from the 1st Air Cavalry Brigade (Fort Hood, TX) have been deployed to California to support wildland fire operations nationally.

## **Predictive Services Discussion:**

Strong high-pressure ridge moves east of the Cascades and extends south across the West as a weak trough moves into the Coastal Northwest, shifting winds to the west and increasing RH along and west of the Cascades. Warm and dry conditions return east of the Cascades and across much of the Intermountain West with above normal temperatures and RH of 10-25%. Fire behavior will pick up on existing fires with an increase in initial attack possible from recent lightning.

Low pressure from the northern and central Rockies into Plains will bring cooler temperatures, higher RH, and widespread showers and thunderstorms, which will extend south to New Mexico and the Texas Panhandle. Weak low pressure off Southern California will pull tropical moisture into far Southern California and southern Arizona Wednesday afternoon and evening with a return of higher RH and scattered showers and thunderstorms. High pressure will begin weakening from the Great Lakes to Texas, but above normal temperatures, RH of 25-35%, and isolated thunderstorms in the Lower Mississippi Valley and interior Southeast continue with an uptick in initial attack. Low pressure in the Mid-Atlantic drifts north with showers and thunderstorms from the Mid-Atlantic to Coastal Northeast with localized flooding in the Coastal Mid-Atlantic. Scattered showers and thunderstorms continue in central and southern Florida.
