

Incident Management Situation Report
Friday, September 19, 2025 – 0730 MDT
National Preparedness Level 3

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (96 fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires:	36
CIMTs committed:	13
NIMOs committed:	0

Nationally, there are two fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Two fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Six US Army HH-60 MEDEVAC Helicopters from the 1st Air Cavalry Brigade (Fort Hood, TX) have been deployed to California to support wildland fire operations nationally.

Predictive Services Discussion:

Weak upper-level low pressure will bring scattered showers and thunderstorms to Northern California south and east into Nevada, southern Utah and the Southwest, with isolated showers and thunderstorms in southern California. Very isolated mixed wet and dry thunderstorms are possible in south-central Oregon as well. Above normal temperatures will persist across the northern half of the West, with minimum relative humidity as low as 15%, but winds will be light. Another day of hot and dry conditions is expected in the Ohio Valley as relative humidity falls to 25–35%, but scattered showers and thunderstorms will move into the Mississippi Valley, which will be most widespread in Minnesota. Isolated thunderstorms remain possible in the Southeast including Florida. Dry conditions will persist in the Northeast behind a cold front, with areas of breezy northwest winds of 10–18 mph creating locally elevated conditions as relative humidity falls as low as 30%.
