

Incident Management Situation Report
Sunday, September 21, 2025 – 0730 MDT
National Preparedness Level 3

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (75 fires)
New large incidents:	0
Large fires contained:	0
Uncontained large fires:	35
CIMTs committed:	9
NIMOs committed:	0

Nationally, there are three fires being managed under a strategy other than full suppression. Zero fires are in Alaska. Three fires are in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Six US Army HH-60 MEDEVAC Helicopters from the 1st Air Cavalry Brigade (Fort Hood, TX) have been deployed to California to support wildland fire operations nationally.

Predictive Services Discussion:

A cold front will move through the northern half of the West with isolated to scattered showers, but rain amounts will be light for most areas except west of the Cascades in Washington. Widespread breezy west winds will occur from the east slopes of the Cascades through Montana, but relative humidity will be higher and above 25% due to cooler temperatures and the showers. However, stronger gusts up to 50 mph are possible in the Cascade Gaps, Columbia Basin, and north-central Montana. Scattered showers and thunderstorms are expected in the Rockies and Southwest, while isolated thunderstorms persist westward into Nevada, and mainly dry conditions return to California amid near normal temperatures.

Drier conditions are expected on much of the Plains as scattered showers and thunderstorms move east into the Mid and Upper Mississippi Valley, Great Lakes, and portions of the Ohio Valley. Modest relief is expected in the Ohio Valley due to the scattered rainfall. Very dry conditions will persist in the Northeast and Southeast, however, with minimum relative humidity as low as 20% but winds will be light. Few showers are expected in the Southeast but isolated to scattered showers are expected to return to much of Florida.
