Thursday, September 25, 2025 – 0730 MDT
National Preparedness Level 2

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (64 fires)

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Predictive Services Discussion:

Breezy westerly winds gusting to 40 mph amid minimum relative humidity of 10-25% will develop along the east slopes of the Cascades into the Columbia Basin creating elevated to critical conditions. An upper-level low moving into California will bring scattered showers and thunderstorms from the central and southern Sierra into southern Nevada and much of Arizona. Mostly dry conditions are expected in the Rockies amid seasonable temperatures and humidity. A cold front stretching from the northern Gulf Coast into the Northeast with scattered to widespread showers and thunderstorms, with significant relief expected for much of New England. Dry conditions are expected on much of the Plains, but temperatures will rise to above normal for much of the northern Plains into the Upper Mississippi Valley.
