

**Incident Management Situation Report
Friday, September 26, 2025 – 0730 MDT
National Preparedness Level 2**

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (113 fires)
New large incidents:	3
Large fires contained:	0
Uncontained large fires:	25
CIMTs committed:	6
NIMOs committed:	0

Nationally, there is one fire being managed under a strategy other than full suppression. Zero fires are in Alaska. One fire is in the Lower 48.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted Monday – Friday at 0730 Mountain Time unless significant activity occurs.

Six US Army HH-60 MEDEVAC Helicopters from the 1st Air Cavalry Brigade (Fort Hood, TX) have been deployed to California to support wildland fire operations nationally.

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A dry cold front will move through Montana and the Dakotas tomorrow, with breezy west to northwesterly winds behind the front amid minimum relative humidity of 15-30% creating localized elevated conditions. Locally breezy north to northeast winds are expected in northern California and southern Oregon, with very low relative humidity of 5-15% expected there and into much of northern Nevada. Above normal temperatures will continue in the northern half of the West except for a brief cooldown today in the Northwest and northern Rockies. An upper-level low in California will move into Arizona this weekend, with scattered to widespread showers and thunderstorms in the Southwest to southern Great Basin, with the heaviest rain likely in eastern Arizona and New Mexico.

In the eastern US, a cold front will slowly progress through the Southeast, with scattered showers and thunderstorms. However, with the rainfall being convective in nature, not all areas will receive wetting rain. Scattered showers and thunderstorms may persist into the weekend expanding the wetting rain footprint. Dry conditions will persist across much of the Plains and return to the Mid-Mississippi Valley and return to much of the Northeast, with above normal temperatures persisting in the northern Plains and Upper Mississippi Valley.
