

**Incident Management Situation Report  
Monday, January 5, 2026 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (December 26, 2025 – January 4, 2026):**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (428 fires)
New large incidents:	9
Large fires contained:	4
Uncontained large fires:	5
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

**[Understanding the IMSR](#)**

**[IMSR Map](#)**

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

New fires: 384  
 New large incidents: 8  
 Uncontained large fires: 5

\* **Madley**, National Forests and Grasslands in Texas, USFS. Five miles east of Patroon, TX. Timber and brush. Active fire behavior with flanking, backing and creeping. Structures threatened.

\* **Pale Horse**, Tahlequah Field Office, BIA. Six miles southwest of Stilwell, OK. Hardwood litter and grass. Moderate fire behavior. Structures threatened.

\* **Aubrey Finder Rd**, Georgia Forestry Commission. Five miles west of Pearson, GA. Southern rough. Moderate fire behavior with creeping and smoldering. Last report unless significant activity occurs.

\* **Little Vian Creek**, Oklahoma DOF. Ten miles northwest of Sallisaw, OK. Hardwood litter. Minimal fire behavior. Last report unless significant activity occurs.

\* **Lukens Island**, North Carolina Forest Service. Three miles northeast of South River, NC. Southern rough. Minimal fire behavior with smoldering. Last report unless significant activity occurs.

**Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.**

## **Predictive Services Discussion:**

A deep upper-level trough will move into the West during the week with light to moderate precipitation focused on the northern half of the West. Snow levels will average near 2,000 feet near the Canadian border and 5,000 to 7,000 feet from the Great Basin and central Rockies southward. Snow levels will fall lower late in the week as the precipitation ends. Breezy and dry westerly winds will develop on the Front Range into the central and southern High Plains today and tomorrow bringing elevated to critical conditions, with winds possibly lasting into Wednesday. As the western trough moves onto the Plains Thursday scattered light precipitation may develop across portions of the Plains, but it may also bring a period of very strong winds and critical conditions to the Trans Pecos into portions of west-central Texas. Breezy and cold, but dry, northerly winds will develop on the central and southern Plains Friday behind the associated cold front.

Farther east, mostly dry conditions are expected in the eastern US the first half of the week except for light snow today in the Northeast and mixed precipitation tomorrow into Wednesday for the Great Lakes and Northeast. Late in the week, a strong cold front will bring widespread precipitation to the Mississippi Valley to the Appalachians late in the week, with mixed precipitation for the Great Lakes. However, the southeast and Florida will remain dry until the weekend. In Alaska, a strong storm will bring blizzard conditions to southwest Alaska with moderate temperatures for the Interior. Very cold air will return for mid to late week for the state, but temperatures will not be as extreme as those observed the past two weeks.
