

Incident Management Situation Report
Friday, January 9, 2026 – 0730 MDT
National Preparedness Level 1

National Fire Activity (January 5, 2026 – January 8, 2026):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (124 fires)
New large incidents:	2
Large fires contained:	1
Uncontained large fires:	3
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Understanding the IMSR

IMSR Map

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

GACC	Incidents	Cumulative Acres	Crews	Engines	Helicopters	Total Personnel	Change in Personnel

Southern Area	ACRES	595	0	63	50	4,428	1,014	6,149
TOTAL FIRES:		45	0	4	1	777	43	870
TOTAL ACRES:		595	0	175	50	4,799	2,542	8,160

Ten Year Average	Quantity
Fires (2016 – 2025 as of today)	213
Acres (2016 – 2025 as of today)	3,539

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Breezy and dry westerly winds will develop ahead of a cold front today in southwest Texas creating elevated conditions, with light snow across the Texas and Oklahoma panhandles behind the front. This cold front will also bring widespread rain across the Mid and Lower Mississippi Valley to the East Coast, with snow in the western Great Lakes. However, portions of the Southeast coast and Florida will receive little precipitation. Otherwise, much drier conditions are expected across the US next week with upper-level ridging in the West and northwest flow across the eastern US. Strong inversions will develop in western valleys while mountain temperatures are above normal. Light snow will spread across the southern half of Alaska the next two days with milder temperatures before very cold air returns early next week. Another round of snow and warming temperatures is possible late next week.
