

Incident Management Situation Report
Friday, January 23, 2026 – 0730 MDT
National Preparedness Level 1

National Fire Activity (January 16, 2026 – January 22, 2026):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (339 fires)
New large incidents:	14
Large fires contained:	11
Uncontained large fires:	5
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

Understanding the IMSR

IMSR Map

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

Fire Activity and Teams Assigned

Totals

New fires:	286
New large incidents:	10
Uncontained large fires:	3

* **Silver Lake**, National Forests in Florida, USFS. Seven miles west of Sopchoppy, FL. Southern rough and grass. Active fire behavior with running, flanking and backing.

* **Sullivan**, National Forests and Grasslands in Texas, USFS. Five miles south of Coldspring, TX. Timber. Minimal fire behavior. Last report unless significant activity occurs.

* **East Lake**, Florida Forest Service. Five miles north of Jarome, FL. Grass. Minimal fire behavior with running. Last report unless significant activity occurs.

TOTAL ACRES:		4,114	6	4,060	513	14,720	7,942	31,355

Ten Year Average	Quantity
Fires (2016 – 2025 as of today)	913
Acres (2016 – 2025 as of today)	15,315

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A strong winter storm will track through the southern tier of the country this weekend into Monday. Heavy snow is expected in the Southwest, with widespread precipitation from the southern Plains to the Southeast, Appalachians, and Mid-Atlantic, but much of Florida and South Texas will see little precipitation from this storm. A major ice storm is expected from central Texas eastward into the Tennessee Valley, southern Appalachians, Carolinas, and Virginia. To the north of the icing, heavy snow is expected from the Texas panhandle and southern Plains through the Mid-Mississippi and Ohio Valleys to the Mid-Atlantic. Very cold air will also spread across much of the eastern half of the U.S. behind the storm, with dangerously cold temperatures for the Midwest. A fast-moving cold front will reinforce the cold air mid to late next week, but precipitation will be light for the Great Lakes and Northeast, falling as snow.

In the West, the strong upper-level ridge of the past ten days will break down as a strong cold front moves southward from Canada. While this front will break the inversions in the West, little precipitation is expected with the front. Overall dry conditions will continue for the northern two-thirds of the West into next mid-next week as the ridge rebuilds in a weakened form. A weak storm may bring light precipitation to northern California, the Northwest, and northern Rockies late next week. Colder conditions are expected across much of Alaska by early next week, but not nearly as cold as early this month. A wetter pattern will continue through the weekend across Hawai'i due to a slow-moving cold front, followed by drier conditions and moderate trade winds next week.

National Predictive Services Outlook

6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is [Entrapment Avoidance](#).
