

**Incident Management Situation Report
Friday, January 30, 2026 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (January 23, 2026 – January 29, 2026):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (194 fires)
New large incidents:	1
Large fires contained:	2
Uncontained large fires:	1
CIMTs committed:	4
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

[Understanding the IMSR](#)

[IMSR Map](#)

CIMT (SA Team 3) has been mobilized to Jackson, TN to provide incident management support in response to Winter Storm Fern.

CIMT (SA Team 1) and CIMT (SW Team 3) are mobilizing to Pearl, MS to provide Winter Storm Fern support.

CIMT (CA Team 8) is mobilizing to Jackson, TN to provide Winter Storm Fern support.

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

TOTAL FIRES:		165	7	18	8	2,615	96	2,909
TOTAL ACRES:		4,417	7	4,421	513	17,703	7,904	34,965

Ten Year Average	Quantity
Fires (2016 – 2025 as of today)	1,318
Acres (2016 – 2025 as of today)	23,591

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A rapidly strengthening coastal storm will hit the Carolinas and Virginia this weekend with heavy snow near and east of the Piedmont, strong winds, and coastal flooding. This storm will then move out to sea with locally heavier snow possible in Cape Cod, but lighter amounts for the Northeast coast. Very cold air will spread into the Southeast on the backside of this storm, with record low temperatures and dangerously cold wind chills. Very cold temperatures will continue in the Great Lakes and Northeast through the weekend, as well, followed by milder but still below normal temperatures for the Appalachians and East Coast. Milder conditions are expected on the Plains for much of the next week, with periods of light snow on the northern Plains and a chance of rain in the southern Plains to Lower Mississippi Valley late next week.

In the West, an upper-level ridge will strengthen next week, with well above normal temperatures and dry conditions. However, some valleys will experience strong inversions, mainly near the Canadian border. Moderate precipitation is also expected into western Washington through the weekend before the ridge strengthens, with lighter precipitation into western Oregon and east into the northern Rockies. A warming trend will continue across Alaska, with periods of precipitation along the southern coast and panhandle. Most precipitation in the lower elevations near the coast will fall as rain, with freezing rain and snow inland. A couple cold fronts will move through Hawai'i into early next week, with the stronger of the two fronts early next week and widespread rain likely.
