Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Southwest winds 10-20 mph with gusts 20-30 mph amid relative humidity of 3-12% will develop across the Greater Four Corners creating widespread elevated to locally critical conditions. Isolated mixed wet and dry thunderstorms will develop from the Uinta Mountains into southern Wyoming, and in southeast New Mexico to west Texas. A warming trend will continue in the western U.S. along with lowering relative humidity for California into the Northwest. Scattered showers and thunderstorms will develop across the northern Plains into the Midwest and Northeast, with some of the storms becoming severe. Record-high temperatures will continue along much of the East Coast from the Carolinas to New England, with relative humidity falling to 25-35% in the afternoon. Near normal temperatures are expected in Alaska today, while moderate trade winds and scattered showers continue in Hawai'i.
