Fires (2016 – 2025 as of today)	30,894	129%
Acres (2016 – 2025 as of today)	2,797,111	131%

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Well above normal temperatures will continue across much of the nation today as a broad upper-level ridge dominates the weather pattern. Highs 10–20°F above normal are expected from east of the Cascades into western Montana and from the Northern Great Plains eastward to the Mid-Atlantic and Southeast.

Monsoonal moisture circulating beneath the ridge will bring another round of showers and thunderstorms from the Southwest into the Great Basin and central Rockies. Heavy rainfall and flash flooding are possible across parts of Arizona and west Texas, with storm coverage and rainfall amounts decreasing farther north. Isolated severe thunderstorms are possible over the mountains of western Montana, while scattered afternoon thunderstorms develop across the Southeast and isolated areas of the Great Lakes Region and Ohio Valley.

An offshore low lifting into the Pacific Northwest will produce gusty winds across the Cascades and may trigger isolated dry thunderstorms over the North Cascades this afternoon. Dry, breezy conditions will also develop across southeastern Oregon, northern California, and the western Great Basin. Farther south, breezy west to northwest winds across California's Central Valley and southern coastal ranges will contribute to critical fire weather conditions.
