

**Incident Management Situation Report
 Sunday June 14, 2026 – 0730 MDT
 National Preparedness Level 2**

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (92 fires)
New large incidents:	3
Large fires contained:	2
Uncontained large fires:	10
CIMTs committed:	1
NIMOs committed:	0

TOTAL FIRES:		1,292	419	105	105	29,047	1,609	32,577
TOTAL ACRES:		84,401	54,418	14,199	46,553	2,110,099	220,444	2,530,114

Ten Year Average	Quantity
Fires (2016 – 2025 as of today)	24,027
Acres (2016 – 2025 as of today)	1,498,280

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

The main region of critical fire weather conditions, due to high based thunderstorms, is expected to occur over the Desert Southwest. The prime location for the thunderstorms will span from southern Nevada east toward the Four Corners region and peak during the afternoon and evening hours. Precipitation amounts from these storms will generally be less than 0.10 inches, which will combine with unusually hot and dry conditions. Meanwhile the fuel conditions in this region are at near record dry levels. Elsewhere in the country the main highlights will be for hot temperatures spanning from western Washington and Oregon into the Interior valley of California which will combine with dry relative humidity levels. Hot temperatures are also expected to span from the Gulf Coast up the Atlantic seaboard which will be followed by a cluster of strong to severe thunderstorms triggered by an approaching cold front in the afternoon. These storms will be capable of producing damaging wind gusts in excess of 50 mph.

Additionally, over the interior of Alaska, in the Delta Junction and Yukon Flats region, winds of 15 to 25 mph will coincide with warm temperatures and relative humidity values into 20 to 25 percent range. This will also lead to critical fire weather conditions.
