Ten Year Average	Quantity	% of Ten Year Average
Fires (2016 – 2025 as of today)	**51,169**	**132%**
Acres (2016 – 2025 as of today)	**6,441,234**	**146%**

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Dry air will continue in the central and southern Appalachians with minimum relative humidity falling to 20-30% but with light winds. Farther north, relative humidity is expected to increase in the Northeast despite moderate westerly breezes. Above normal temperatures persist in the Plains and Mississippi Valley but deep moisture will move northward from the Gulf producing widespread showers and scattered thunderstorms bringing much needed relief to the Lower Mississippi Valley. Drier weather is expected across the West with temperatures near to below normal, with the coolest temperatures relative to normal in the Southwest. Drier weather is expected across most of Alaska except for light precipitation along the southern coast and in the panhandle amid near normal temperatures. Trade winds continue across Hawai'i with isolated light windward showers.
