Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A cold front will move through the Appalachians and to the East Coast today, with scattered showers and isolated thunderstorms, but little rain will fall south of the Appalachians and Carolinas. Another weak cold front will move through the Great Lakes with more showers. A weakening upper-level low will move through the southern Plains, with scattered showers mostly across Oklahoma. Mostly dry conditions are expected in the West as temperatures average near normal, but rain will move into western Washington with some high elevation snow into the northern Cascades. Mostly dry conditions will persist across Alaska today except for showers near the south coast and in the panhandle amid slightly above normal temperatures. Breezy trade winds will continue across Hawai'i with a few light windward showers.
