Ten Year Average	Quantity	% of Ten Year Average
Fires (2016 – 2025 as of today)	**52,543**	**130%**
Acres (2016 – 2025 as of today)	**6,487,542**	**146%**

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Dry conditions are expected across much of the U.S. today, including the areas of the Northeast and south Texas that received precipitation over the weekend. However, a few showers may linger into the afternoon along the Texas coast. Showers are also expected to persist near and west of the Cascades and Oregon and Washington, with snow confined to the highest elevations. Temperatures will also be mostly above normal across the country today except for near normal temperatures in the Northeast and Florida, with near to below normal temperatures in central and south Texas. The greatest warm temperature anomalies will occur in the northern Plains and Midwest where temperatures may rise to 20°F above normal. Rain and snow will spread into south-central Alaska and the panhandle from a storm in the Gulf of Alaska, while seasonable temperatures and dry conditions occur in the Interior. Breezy trade winds will continue across Hawai'i with isolated windward showers.
