**Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.**

## **Predictive Services Discussion:**

A ridge of high pressure building in the wake of Isaias will bring hot, unstable, and windy conditions to northern Louisiana and east Arkansas today. A trough of low pressure over the inland Northwest will weaken today, though below normal temperatures will continue there and across the Great Basin with widespread precipitation across the Great Basin as well. Temperatures begin to rebound over northern California, but there will be less wind today and still some showers over the Far Eastside and Tahoe regions. Showers and isolated thunderstorms continue across southern California along with south to west winds of 20 to 30 mph with gusts to 50 mph across the mountain ridges and desert passes. Temperatures there will cool to 15 to 20 degrees below normal. Cool conditions continue across the northern Rockies with widespread precipitation across the Southwest.
