Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Low pressure weakens over the Plains with scattered showers and isolated thunderstorms, and a dry cold front will move through the Northeast. A Pacific storm will move into the Northwest and northern Rockies with a cold front producing light to moderate rain the lower elevations and snow above 5,000 to 7,000 feet. Dry air with near to below normal temperatures are expected in California and the Greater Four Corners. Gusty easterly winds will diminish in the Southeast today, but temperatures will remain above normal with minimum relative humidity of 20-30% in the Lower Mississippi Valley. A strong storm will move east through Alaska, with heavy snow and localized blizzard conditions for the central Interior, while western Alaska observes less precipitation and light rain and snow occurs in south-central Alaska. Trade winds are expected to remain light in Hawai'i with isolated to scattered showers.
